

Installing Mizan Lite

For whoever installs the application in the shop. No step needs the internet.

What is needed

	Minimum
Windows	10 (22H2) or 11, 64-bit
macOS	13 or later
Memory	4 GB
Screen	1366×768 or larger
Printer	an 80 mm thermal receipt printer (optional)

Installing on Windows

1. Copy Mizan Lite ... Setup.exe from a USB drive to the computer.
2. Run it. "Windows protected your PC" appears because the application is not signed: press More info, then Run anyway.
3. Choose the installer's language and continue. The installer asks for administrator rights once.
4. If the computer has no WebView2, the installer installs it from a copy inside itself — no internet. Do nothing; wait for it to finish.
5. When it finishes, a Mizan Lite shortcut is on the desktop and in the Start menu.

The shop's data is kept in %LOCALAPPDATA%\Mizan Lite, and uninstalling does not delete it.

Installing on macOS

1. Open Mizan Litedmg and drag Mizan Lite into Applications.
2. Open it the first time: the system refuses it because it is unsigned. Go to System Settings → Privacy & Security, scroll to the Mizan Lite message, press Open Anyway, then Open.
3. The shop's data is kept in ~/Library/Application Support/Mizan Lite.

First run

Follow "The first day" in the shop guide: the shop's name, the language, the owner PIN, the exchange rate — then write the recovery code on paper.

Setting up the printer

1. Install the printer in the operating system first (USB cable and the maker's driver), and check it prints a test page from the system.
2. In the application: Printer → choose the printer and the paper width (usually 80 mm), then Print a test page.
3. If the page comes out distorted or cut off, change "How receipts reach the printer" to Straight to the printer (ESC/POS) and test again.
4. Type the shop's phone, address and thank-you line to appear on every receipt.

The outside backup folder

Backups → Choose a folder...: pick a USB drive that stays plugged in, or a folder that is synced. Every backup is copied there and checked. Leave the drive in; if it is pulled out, the application says the last outside copy is old.

Installing a newer version

Close the application first — the installer refuses to install over a running copy — then run the new installer over the old one. The data stays as it is, and a backup is taken before any database update.

Moving the shop to another computer

1. On the old computer: Backups → Back up now, then Save a copy... to a USB drive.
2. On the new computer: install the application and complete first run with any details.
3. Backups → Restore from a file...: choose the file on the drive and restore it. The application restarts on the shop's data.

Uninstalling

Windows: Settings → Apps → Mizan Lite → Uninstall. macOS: delete the application from Applications. In both cases the shop's data stays where it is; delete it by hand only if you are sure, and only after taking a copy.
